

M65847FP/SP

DIGITAL KEY CONTROLLER

DESCRIPTION

The M65847 is Complementary Metal Oxide Semiconductor Integrated Circuit used to control the key of music in karaoke players.

This device is suitable for providing a karaoke system such as a CD radio cassette recorder, a mini component stereo system or VCR, with a key control function.

FEATURES

- I/O low-pass filter, A/D, D/A converters and control logic circuit which are required for digital key control are built-in to allow one-chip configuration of a digital key controller.
- Built-in 16K-bit RAM
- 3 modes are selectable for control: self mode, easy mode and MCU mode.
 - Self mode: Key conversion by push switch
 - Easy mode: Key conversion by parallel data
 - MCU mode: Key conversion by serial data
- Built-in clocks without an external circuit.
- Built-in auto reset circuit (The IC reset as power is turned on.)
- Single power supply (5V)

FUNCTION DESCRIPTION

1. Operation control

Operation control is provided in the following 3 modes:

- (1) Self mode
- (2) Easy mode
- (3) Microcomputer mode

MODE SETTING METHOD

MODE1	MODE2	MODE	Key conversion method
L	L	MCU	Serial data from microcomputer
H	L	Easy	Parallel data
L	H	Self	UP/DOWN Key (no microcomputer required)
H	H	Test	Test mode (normally not available)

2. Self mode

(1) Key setting

A key can be set using the push switch connected to pin ④ KEYDOWN and pin ⑤ KEYUP.

The key goes down by one (chromatic) each time the DOWNSW is pushed, and goes up by one (chromatic) each time the UPSW is pushed. Once going down to -4, the key remains unchanged even if the DOWNSW is pushed. Also, once going up to +4 the key remains unchanged even if the UPSW is pushed. Keeping on pushing either switch changes the key in chromatic every 524msec (fck=8MHz).

Pushing both DOWNSW and UPSW simultaneously sets the key to ± 0 .

The switch input anti-chattering time is 16msec (fck=8MHz).

(2) LED indication

Connecting LEDs to outside as shown previously allows LED indication of key setting status through the outputs of pin ⑥ KEY0 to pin ⑪ KEY5.

Key setting	KEY0	KEY1	KEY2	KEY3	KEY4	KEY5
F+4	H	H	H	H	L	H
F+3	H	H	H	L	H	H
F+2	H	H	L	H	H	H
F+1	H	L	H	H	H	H
F 0	L	H	H	H	H	H
F-1	H	L	H	H	H	L
F-2	H	H	L	H	H	L
F-3	H	H	H	L	H	L
F-4	H	H	H	H	L	L

0 1 2 3 4 $\pm$ indication

3. Easy mode

(1) Key setting

Paralleled data entered into pin ⑦ KEY1 to pin ⑪ KEY5 can be used to set a key.

Key setting	KEY1	KEY2	KEY3	KEY4	KEY5
F+4	H	H	H	L	H
F+3	H	H	L	H	H
F+2	H	L	H	H	H
F+1	L	H	H	H	H
F 0	H	H	H	H	H
F-1	L	H	H	H	L
F-2	H	L	H	H	L
F-3	H	H	L	H	L
F-4	H	H	H	L	L

(2) Clock output

Data entered into pin ④ KEYDOWN and pin ⑤ KEYUP can be used to output square-wave clocks from pin ⑥ CLK0.

KEYDOWN	KEYUP	CLK0 Clock frequency (fck=8MHz)	Remarks
L	L	OFF	Key setting status output for F0:F0:L, other than F0:H
L	H	320kHz	Clock for M65843P/AP (digital echo IC)
H	L	450kHz	Clock for M65830AP/CP (digital echo IC)
H	H	2MHz	Clock for M65831P/AP (digital echo IC)

(3) LED indication

Like the self mode, connecting LEDs to outside as shown below allow LED indication of key setting status.

When the LEDs go on, current flows into the external L level setting, not into the IC. Thus, provide the L side with LED drive capability.

4. MCU mode

(1) key setting

Serial data from the microcomputer allows key setting.

Data is taken inside at the falling edge of SCK and the last-packed 8 bits are latched at the raising edge of STROBE.

F-13		L	L	H	L	L
F-14		L	L	L	H	H
F-16		L	L	L	H	L
F-18		L	L	L	L	H
F-20		L	L	L	L	L

Mode setting		D5	D6	D7
VSC/VMC	VSC	H	—	—
	VMC	L		
Mute (key control output mute)	Mute ON	—	H	—
	Mute OFF		L	
Test	Test (normal setting disabled)	—	—	H
	Normal			L

There are two major modes to change the key; VMC (variable music control) and VSC (variable speech control).

VMC provides relatively small variable range but maintains high sound quality, which is mainly used key control orchestra music for singing (called KARAOKE). On the other hand VSC provides lower sound quality but variable key range as wide as ± 1 octave or more, which is used key compensation in reproduction of source music in double speed.

D/A converter output (pin 26 DAINT OUT) after key control is muted.

(3) Clock output

Like the easy mode, data entered into pin 4 KEYDOWN and pin 5 KEYUP can be used to output square-wave clocks from pin 6 CLK0.

④ KEYDOWN	⑤ KEYUP	⑥ CLK0 Clock frequency (fck=8MHz)	Remarks
L	L	OFF	Hi-impedance
L	H	320kHz	Clock for M65843P/AP (digital echo IC)
H	L	450kHz	Clock for M65830AP/CP (digital echo IC)
H	H	2MHz	Clock for M65831P/AP (digital echo IC)

(4) Data input timing

Symbol	Name	Min.	Typ.	Max.	Unit
t1	Data rise time	—	—	500	ns
t2	Data fall time	—	—	500	ns
t3	SCK clock width	250	—	—	ns
t4	SCK "L" pulse width	100	—	—	ns
t5	SCK "H" pulse width	100	—	—	ns
t6	SDATA setup time	100	t3/2	—	ns
t7	SDATA hold time	100	t3/2	—	ns
t8	STROBE rise hold time	200	—	—	ns
t9	STROBE "H" pulse width	100	—	—	ns
t10	SCK setup time	100	—	—	ns

(5) Clock oscillator circuit

The M65847 incorporates a clock oscillator circuit in it, thus allowing supply of master clocks without an external circuit.

The oscillator frequency is:
fck=8MHz

6. Reset

The M65847 is automatically reset when the power is turned on, and is automatically canceled nearly 120msec later.

Self mode.....Key F0
Microcomputer mode.....Key F0, VMC, Mute OFF
Easy mode..... Depending on setting of pin 7 to 11

COMPATIBILITY WITH M65840

In the MCU mode, the M65847 is compatible with our key controller IC M65840 as follows:

(1) Control data format

The setting function, data format and data input timing are the same as those of M65840

(2) Pin configuration and external components

The pin configuration and external components are almost the same as those of M65840 part of external components can be reduced (See below)

The components marked with a circle are required for M65840, not for M65847. Other external components are shared with both ICs. Pin ⑤, ⑥, ⑦, and ⑧ with a built-in pull-down resistor are available with NC.

As mentioned above, the M65847 can be replaced with M65840 without changing the program and board of the microcomputer

(3) Electrical characteristics

Because of a sampling frequency of 250kHz (M65840:500kHz), the M65847 has different electrical characteristics

Noise: -80dBVtyp (M65840: -85dBVtyp) THD: 1.3%typ (M65840: 0.8%)
